

The Tradeasi™ Solution

Making it easier for people to do business

Delivering electronic orders in seconds

The Tradeasi Service delivers your orders from a variety of sources into your chosen Back Office system within seconds, thus eliminating all 'keying in' processes and providing exceptional service to all your customers. From a field salesperson entering an order on a hand held computer, to a SME adding an order to a secure Web browser, as well as all manner of EDI connections from the larger buyers, Tradeasi delivers all orders into your back office, in the same required format, ready for allocation, picking, packing and invoicing.

Order acknowledgements are automatically sent back to the buyer, to confirm receipt of the order, either by email in the case of the SME buyer and by EDI with larger organisations.

The Tradeasi Solution is a Pay as you Go service, costing much less than your current data entry process, and ensuring the very ultimate in Customer Service.

The Tradeasi™ Solution

Tradeasi

Pocket Tradeasi™

Field salespeople enter orders with the buyer, send the order by GPRS to the Tradeasi server, and thus onward into a back office system within seconds.

Retail Tradeasi™

Consumers browse a version of the online catalogue, and place orders for fulfilment.

Company Tradeasi™

A secure web based ordering system, which presents a product catalogue to the buyer, with the resultant order being sent to the Tradeasi server and thus onward to a back office within seconds.

Tradeasi™ EDI Hub

Replaces outdated EDI software and allows acceptance and response to all organisations trading electronically.

Database and server

Tradeasi™ Link

Back Office server
eg. SAGE etc

Software installed on a network that initiates and controls the flow of orders from the Tradeasi server to and from a back office system.
